

WORLD HAPPENINGS
BRIEFLY TOLD

Canadian Gideons set a new record by placing 14,000 Bibles in hotels, hospitals, prisons and schools during the past year, it was announced.

Inspector O. Jeffrey demonstrated before Humane Society officials in Galt, Ont., a method of using carbon monoxide gas from an automobile exhaust to kill animals painlessly.

Rt. Hon. L. Hore-Belisha, minister of transport, pointed out that from 60 to 80 per cent. of motor accidents in the United Kingdom occur on straight roads in fair weather.

Norman William Whitaker, Victoria barrister, was named by Premier Pattullo as speaker of the 19th British Columbia Legislature, subject to approval of the House.

Forest fires in northern Manitoba and Saskatchewan have laid waste hundreds of acres of timberlands and caused many thousands of dollars damage.

G. G. McGee, member of parliament for Vancouver, has suggested a British Empire fair should be held in 1939 to celebrate opening of the First Narrows bridge, now under construction.

Fourteen passenger airplanes were put into operation on the East air mail line linking Cologne with Cherbourg, cutting the journey from Cologne to New York and vice-versa to five days.

The Bank of Canada accepted tenders for \$25,000,000 in Dominion of Canada treasury bills due Sept. 15, 1937, the average discount price being 99.85819 and the average yield .643 per cent.

Major General Oscar Westover, chief of the United States army air corps, believes dirigibles can be used "very effectively" against United States industrial areas during mobilization for any future war.

Office Is Wheel Chair

Paralyzed Girl Would Not Accept Life of Helplessness

A wheel chair is the office of Katy Swinden, paralyzed since childhood, who has built a profitable business in telephone calls at Houston, Texas. Relatives and friends—but not Katy—resigned themselves to the thought the invalid girl was doomed to a life of helplessness.

A minister gave her the idea that she should have her own office. He installed a telephone and offered to pay her a small amount to make calls concerning church activities.

Katy quickly extended the service. She contacted various clubs and offered to make their telephone calls. Now she makes club appointments for many large organizations. The work pays her a steady income.

Few of her customers know she is an invalid. She sells her service on a business basis—her chief asset her car, clear "telephone voice."

Katy, who makes her own clothes and paints for a hobby, has built a small poultry business as a side line. She is the mascot of the Houston fire department.

To Stop Abnormal Growth

Operation Performed On Girl Over Six Feet Tall

Sue De Crescenzo of Scranton, Pa., victim of gigantism, was cheerfully as she started recovery from a rare operation performed at Hahnemann Hospital to check her growth. At 20, she is six feet, three inches, weighs 243 pounds and has the muscles that go with her size and weight. The operation won't reduce her size, but it should halt the abnormal growth, which otherwise could continue for several years until she reached a weight of 300 pounds. Besides, the growth of giantism was the cause of the trouble. It grew out of the end of the pituitary gland, a tiny ductless gland which regulates growth.

Sisters Receive Degree

Oklahoma Quadruplets Now Ready To Embark On Career

The Keys sisters, first quadruplets in history to complete college courses, received their bachelor of arts degrees recently at Waco, Texas, and looked forward to a career of "quadruplicity."

The pretty daughters of Mr. and Mrs. Fluke Keys, Holla, Okla., were the central figures in Baylor University's 92nd annual commencement exercises dedicated to them.

"I am writing a new chapter in the annals of education," President Pat M. Neff said, as he handed diplomas to Mary, Mona, Leota and Roberta.

They stood on their own merits. President Neff said, "they asked no favors and none have been granted." The sisters departing now will turn to the stage, capitalizing for the first time on what Leota called "quadruplicity."

Seventy per cent. of the 275,000, 000 passengers who ate in London and Northeastern Railway dining cars last year took tea rather than coffee with their meals.

A black horse has the shortest, and a gray horse the longest life span.

Knew Master's Car

Stray Dog Must Have Recognized Sound Of Motor

How can a dog know his master's automobile from thousands of other similar cars a block away, by the sound of its motor?

Arthur Lawton, "red-cap" at the Union Pacific in Pasadena, California, would like an answer to the question, as he told of a strange experience.

A stray dog wandered into the station. He refused to allow anyone to come near him, although accepting regular food rations from kind-hearted Arthur. For four days the dog sat on the sidewalk leading into the station watching automobiles go by. During the time Arthur estimated 200,000 or more cars whizzed along Colorado street.

"One morning all of a sudden," said the "red-cap," "the dog came dashing into the station, occasionally knocking me down as he went by. He jumped into a car and sure enough, it was the owner. The strangest part about it is that he started on his wild dash even before the car was in sight."

A happy reunion between the dog and his owner followed in which the "red-cap" came in for a large share of thanks for the care he took of the devoted pet. Strangely enough, after introduction, the dog who heretofore had paid no attention whatever to Arthur or anyone else, jumped about the Union Pacific station, around about the "red-cap" in frenzies of joy as if he too were extending thanks.

Trammen Ride In Style

Modern Caboose Is Up-To-Date In Every Way

Modernization has caught with "the little old caboose" behind the train.

The familiar old caboose with its squat cupola, its architecture unchanged for more than a quarter century, is undergoing face lifting operations on one of the big western railroads in the United States.

And not only that, but the old familiar color of brick red has been changed to the silvery sheen of aluminum, with trimmings of black. The 900 cabooses on this railway system are going through the shops and the modernizing touch is being put on the most spectacular operation is removal of the cupola where once the brakeman was wont to sit and scan the long line of hurrying cars ahead, watching for trouble.

The remodelled cabooses are roomier and airier, inside are modern safety stoves on which the conductor and his brakemen cook their meals; brilliant oil lamps, a built-in refrigerator, tool lockers, leather upholstered seats, and a host of other improvements, water supply and clothing lockers.

Safer Than Civilization

Woman Explorer Would Rather Take Chances In Jungle

Mrs. Martin Johnson, widow of the famous explorer killed in a recent air accident, is returning to the jungle where she and her husband lived for years in the course of their travels. In an article in the American Magazine she says: "On this trip to America I find myself surrounded by human beings who seem to me more dangerous than wild animals. They are capable of killing, not just to satisfy hunger, but to satisfy pride, appearance, ideas. I have encountered strikes, riots, I have heard frightful rumblings from abroad. I have read of lynchings, of whippings, of secret societies bent on vengeance. I have learned that in one year 30, 000 men and women, snapping under the strain and tension of civilization, have taken their own lives. And all ways before my eyes is the ever-mounting toll of the motor car. Even little children are the victims of haste and excitability."

Oldest Working Blacksmith

At 86 He Says He Would Rather Wear Out Than Rust Out

Ontario's oldest working blacksmith, James Slack, of Ottawa district, would rather "wear out than rust out," so his anvil still clangs as it has done for 71 years. At 86, Mr. Slack is hardy and smiles when he says, "I give myself four more years."

Mr. Slack was a delegate to the Massey-Horseshoe and Carriage Workers' Association convention at Kingston. He was apprenticed under a \$200 bond put up by his father in 1866 and for the next 81 months, for the second year, \$2 a month. When 21 he married, starting with \$7.50 and his trade.

To-day he owns three farms near his shop at Merivale.

Conserving Paper

Wrappers Not Used In Germany Unless Really Necessary

To save wrapping paper, the German government has urged housewives to bring plates or glass to the store for carrying purchases of sauerkraut, salads and pickles. Enjoined retailers not to wrap canned goods, toothpaste, candies, etc., already enclosed in tubes or cartons.

The economy is part of the four-year plan to make the nation economically independent.

Canada has 42,965 miles of railways.

Causes Of Plant Diseases

Unfavorable Chemical Conditions Of The Soil Listed As Factor

Diseases have been known to attack plants ever since ancient times. Blights, mildews and rusts have been referred to in the Bible, and the writings of the ancient Greeks and Romans show that the true nature and cause of plant diseases were not understood and that ideas concerning them were of a superstitious character. In fact, little was known of the origin of disease in plants until about the middle of the nineteenth century when investigators, aided by the compound microscope, made great strides towards associating diseases with their real causes.

Disease in plants may be defined as a disturbance of structure or function which may affect a part or all of the plant, thereby threatening its life or lessening its economic value. Such a definition leads to the assumption that there are different kinds of plant diseases. These are classified according to the nature of the causal agent as follows: (1) Disturbances due to non-parasitic agents (as nutrition, environment, etc.); (2) Parasitic diseases which result from the attack of some organism, or parasite; (3) Virus diseases, due to infected sap stream (cause unknown).

Among the agencies causing non-parasitic diseases or "ill health" in plants may be mentioned such things as unfavourable chemical conditions of the soil, unfavourable climatic conditions and mechanical injuries.

Unfavourable chemical soil conditions may be due to a deficiency or excess of a certain chemical element. For example, a deficiency of magnesium impairs the amount of starch production, thus causing the disease known as magnesium deficiency.

In the case of potatoes, it has been reliably reported that this condition may be corrected by employing magnesium limestone in the preparation of the Bordeaux mixture used in preventing blight. Turnip root heart is another non-parasitic disease associated with a deficiency of boron in the soil, and corrected in most soils by the addition of borax at the rate of ten to fifteen pounds per acre. Unfavourable climatic conditions may cause injury to plants. Very strong sunlight, for instance, gives rise to sunscald. Too much shade on the other hand causes inadequate starch formation. Incorrect air relations in storage are known to be responsible for apple rot and blight, for potatoes. Frost and freezing injuries cause severe injury to leaves, fruit, flowers, roots and tubers. Most gardeners, farmers and orchardists are familiar with the more common injuries of this type, such as winter killing of fruit trees, twig die-back, and frost necrosis of potatoes.

Parasitic diseases, interpreted broadly, include all disturbances in the life of plants inflicted by a living organism, either plant or animal. Fungus plants are probably the most important of such parasites. Being unable to manufacture their own food they steal it from living plants, thus causing injuries known as fungous diseases. Latent blight and rot of potatoes illustrate this type of disturbance. Prevention of such diseases is achieved by means of spray applications.

Virus diseases result from infection by a virus which is "sap" transmitted from plant to plant, chiefly by aphids and leaf hoppers, or even by plant contact. Falling within this group are such important diseases as spindle tuber, mosaic, leaf roll of potatoes, peach yellows, bean mosaic, raspberry mosaic, cherry mosaic, and tobacco mosaic. Destruction of infected plants, insect control and the use of resistant varieties are the main features in preventing the ravages of these diseases.

Still Seeking Sign

But Search For Reincarnated Dalai Lama May Be Over

A nine-month-old baby may rule the roof of the world. Since the 13th Dalai Lama, the center of the Buddhist faith, died in 1933, the search has gone on unsuccessfully for his reincarnation. Recently when the Panchen Lama, the religious head of the Buddhists, was blessing a large crowd of his followers, a mother carrying a baby came up. The baby grabbed the Panchen's beads and refused to give them up. Accepting this as a sign, the Lama sent men and money to take care of the baby and, unless a more powerful sign comes, the nine-month-old child will probably become the 14th Dalai Lama.

A Travelling Restaurant

Taking Business To The Customer Is Twenty feet long and shaped like an ear of corn, a commercially built trailer has a restaurant and confectionery inside, with seats for ten people. A collapsible table is used in serving.

The restaurant-on-wheels, either at the restaurant or elsewhere, the operator may serve customers standing outside. An attractive appearance is attained by painting the hulk a dark aluminum and the kernels a gleaming aluminum. The trailer takes up the center of the operator to move easily, thus carrying the business to the customer—Popular Mechanics.

The acid test of a man's Sunday religion is his Monday's behavior.

MAKE THIS MODEL AT HOME AND WEAR IT ALL DAY LONG

By Anna Adams

Unusual Story Connected With Making Time In Montreal

As tenants, the citizens of Montreal are notoriously restless. Those who don't fit (as the Scots say) on the first of October usually move on the first of May. Catherine Maclellan, 300,000 people moved over the turn of the month this spring. With so much shifting, queer things are bound to happen. This is one of them:

A year and a half ago a tenant who called H. J. Parkinson moved from Notre Dame de Grace to Montreal West. Just before moving day this spring he received a letter forwarded from his old address on H. J. Parkinson right, same name, same initials, but it was not for him. It contained three dollars, without clue as to where they came from.

Our Mr. Parkinson could not remember any such debt and had a conscience. So he looked in the telephone book and there he found one H. J. Parkinson, living on Oxenden avenue.

Yes, the second Mr. Parkinson was expecting some money. Three dollars. Very well, our hero said he would drop in on it.

The promise slipped his mind until several days later. When he did call at the Oxenden avenue house he found it empty.

Well, he thought, the telephone number must be the wrong one. He discovered, to his astonishment, that Parkinson Two was living at Parkinson One's old address on Marcell avenue. It just happened that the three dollars got to Marcell avenue ahead of its rightful owner.

Never dreaming of a new H. J. Parkinson living in the old H. J. Parkinson's house, the postman had faithfully forwarded the money—Maclellan's Magazine.

U.S. Trade Treaty

Says Reciprocal Trade Agreement Does Not Go Far Enough

The reciprocal trade agreement between Canada and the United States, signed in 1935, is all right as far as it goes but it does not go far enough. The Canadian Chamber of Commerce and the Canadian Manufacturers' Association, in a report issued by Dr. W. W. MacLaren of Williamstown, Mass.

The noted United States expert on economics, professor of economics at Williams college, discussing the trade barriers and trade barriers for the nearly 100 leaders in the two countries, concluded his review of the matter by saying:

"The main criticism of the agreement that I have to offer is that the responsible officials of the two countries moved too cautiously in the enterprise of taking down the barriers to trade between us."

"Where the conditions of trade have been considerably improved by a significant reduction of the trade barriers, the exchange of goods has been great. Where the agreement did nothing at all to improve the conditions of trade the proportional increase of imports or exports has been small."

"It seems to me the agreement represents the practice of the libealistic system in tariff reduction, the dose was minute; also it seems to me that in the circumstances the time has come for a larger dose."

Interested In Everything

Princess Elizabeth Wanted To See Mysteries Of Broadcasting

One of the greatest charms of Princess Elizabeth is her vital interest in all things that come before her. She is really observant and full of natural, intelligent curiosity, says the London Daily Telegraph.

The B.B.C. arrangements for broadcasting commentaries on the Naval review interested her immensely. When opportunity presented, she stole over to the B.B.C. outside broadcasting van at the Southern Railway Jetty, in Portsmouth Dock.

King and Queen to share in the treat. All three carried out an inspection. The highlight was the throwing down of the gauntlet by the King's champion in challenge to all who do not share the army's loyalty to the sovereign.

As the champion rode into the arena, a procession bearing the banners of the kings and queens from 1066 to 1837 clusters around a representation of the lion of the empire guarding the imperial crown.

There's The Overhead

The colored preacher was talking to his congregation about free salvation. Finally he asked Brother Smith to take up the collection. At this point an old dandy got to his feet and said: "Parson, I thought you said salvation was free—free as the water we drink."

"Salvation is free, brother," replied the preacher. "It's free, but it's free; but when we pipes it to you, you have to pay for the piping."

The Latin word "sinus," meaning Chinese, is the source of the word "sinus" now in common usage.

A Queer Incident

Unusual Story Connected With Moving Time In Montreal

As tenants, the citizens of Montreal are notoriously restless. Those who don't fit (as the Scots say) on the first of October usually move on the first of May. Catherine Maclellan, 300,000 people moved over the turn of the month this spring. With so much shifting, queer things are bound to happen. This is one of them:

A year and a half ago a tenant who called H. J. Parkinson moved from Notre Dame de Grace to Montreal West. Just before moving day this spring he received a letter forwarded from his old address on H. J. Parkinson right, same name, same initials, but it was not for him. It contained three dollars, without clue as to where they came from.

Our Mr. Parkinson could not remember any such debt and had a conscience. So he looked in the telephone book and there he found one H. J. Parkinson, living on Oxenden avenue.

Yes, the second Mr. Parkinson was expecting some money. Three dollars. Very well, our hero said he would drop in on it.

The promise slipped his mind until several days later. When he did call at the Oxenden avenue house he found it empty.

Well, he thought, the telephone number must be the wrong one. He discovered, to his astonishment, that Parkinson Two was living at Parkinson One's old address on Marcell avenue. It just happened that the three dollars got to Marcell avenue ahead of its rightful owner.

Never dreaming of a new H. J. Parkinson living in the old H. J. Parkinson's house, the postman had faithfully forwarded the money—Maclellan's Magazine.

Inventors Show New Gadgets

Interesting Devices Shown At National Inventors Congress

About 600 gadgets, ranging from an improved mousetrap which captures mice by the down to a self-activating diving device, were placed on public view as the annual convention of the National Inventors Congress opened its sessions in New York.

An Albany school teacher, Mrs. Katharine Miller Cohen, was responsible for the invention of a rotary yarn winder which is designed to "emancipate" the more or less intricate boys and girls who stand with arms outstretched while grandmothers spin. Another woman is demonstrating a new cooking utensil which makes it possible to prepare asparagus in an upright position.

The mousetrap, which operates on the idea of using the family cat, is a portable, motion picture, attracted considerable attention. The device lures the mouse through a door by the smell of cheese or bacon. When the door shuts behind it, the mouse, alarmed, runs through a corridor beyond the dangling delicacy as it hunts for a way to escape. The corridor, however, is so wired that it catapults the mouse into an adjacent antechamber, at the same time throwing the entrance open once again for the next victim.

Another device is intended to reveal to farmers which hens are good layers and which are not. Invented by five brothers in Berkeley, Calif., this device has three doors. If a hen lays an egg, the egg rolls down an incline, shutting a side door but opening the front exit for the hen. Thus, a hen which has laid an egg must leave the trap by a side exit, while the egg-laying hen may be seen leaving by the front door.

A large rubber bag enables bathers and travellers to diorbe in comparative privacy. A person wanting to make a change of apparel can change in high privacy, without the neck, and lay aside garments through apertures for the arms. Another invention designed to add to the comfort of travellers is a sanitary package which is released at the insertion of a small coin. The package contains a small tube of shaving cream, soap, towel, a razor and a powder puff—New York Times.

Industry And Agriculture

Devote Too Much Attention To Industry And Too Little To Agriculture

Dr. W. A. Riddell, Canadian government delegate to the international labor conference, urged the conference to devote more attention to the realization of the interdependence of industry and agriculture.

He suggested one of the weaknesses of the international labor office was it devoted too much attention to industry and too little to agriculture.

Since 1935, he proceeded, Canada had continuously endeavored to open up the channels of trade and her customs administration had been greatly liberalized. Reciprocal effects of negotiations with a number of countries, including Great Britain and the United States, already were being seen in increased import and export trade.

Dr. Riddell said Canada ranks among the first of tourist countries, with business now amounting to about \$300,000,000 annually, and stands fifth among the trading nations of the world.

Supports Imperial Conference

London Newspaper Thinks Empire Doing The Right Thing

The London Sunday Observer in discussing the Imperial Conference described Imperial preference as a "big idea" which is worth any number to the bush.

The paper foresaw the time might come when a freer interchange of goods throughout the world was possible but meanwhile upheld Imperial preference.

"The more closely it (Imperial preference) is adhered to by all its beneficiaries, the more likelihood will there be of movements for less restricted trade in general assuming a serious and permanent character" the newspaper stated.

In connection with Imperial defence The Observer said: "The Dominions brought a distinctly realistic mood to the present conference."

Doors Not For Sale

Collectors were flooding the Westminster Abbey annex contractors with staggering offers for the doors through which the king and queen passed on their way to the coronation service. Doors were made of wood from the piles of Waterloo bridge and the piles were cut in Canada. They will be placed either in one of the royal palaces or a museum.

Just The Reverse

Some Chinese laugh at sad music and cry at jazz; shake their own hands when they meet a friend, wear a hat on entering a house, and remove it when leaving; read books backwards by beginning on the last page and finishing on the first; wear white to funerals and in some places the male wears skirts, while the female wears trousers.

You can also lead a voter to the poll but you cannot make him think.

THE CANADIAN ADVENTURE

TRIP OF BOB SIM, AN ONTARIO FARM BOY

No. 3 of a Series of 16 Letters

Ontario.—Quebec.—Nova Scotia: Bob mentions them all in this letter. He's hitch-hiking now, either the Stiver or the pocket book couldn't stand the graft.

Bob seen salt water for the first time, and tried to eat raw clams on the beach—his learning, a lot of things including how to "wiggle his thumb" for a ride!

Truro, N.S. (Special Despatch by Bob Sim).—At Toronto I abandoned the idea of using the family car in favour of hitch-hiking. I should have explained that last week, but did not have time. Now, hitch-hiking my friends, is a gentle art. You don't carelessly, not too gaudily, for you must assure motorists that you are not a hobo, and at the same time, not wealthy. You wiggle your thumb in the general direction of the desired destination. If you are lucky, someone picks you up. If not, you walk. In North West Brunswick, I wasn't so lucky. An Irishman picked me up. I was so tired, I could hardly get my car. "Why Irish men is not here," he said, "we have men around here who are Irish."

The motorist is running a chance. I may rob him. I am running a chance. He may hit a telegraph pole. He may go to jail. He may lose 500 miles. One motorist would have taken me to Oregon. Hitch-hiking is cheaper than taking your own car. You don't have the bother of driving—nothing to bother you—often not even a ride.

The Eating Question

Having eliminated the expense of gasoline, there only remains sleeping and eating. If these two items could be eliminated you could cross the continent without cost.

The Dominion Hotel, Ottawa, Ontario, is a farmer's hotel. Standing behind the market it has one of the few lively stables in the country. They serve green tea, highballs, and when you are finished, ask if you have had enough. I had been walking a long time for the question, and I said, "No." Result—more pie and more green tea.

East of Montreal the province of Quebec is French; most of them can speak no English. Now I took French in high school, but I had no attempt to learn to speak it. I got along O.K. until noon. At the hotel they didn't know English, and I tried to say. I found out from the next English-speaking person how to say "I'm hungry." French is a language I reached New Brunswick the day before yesterday. When I saw salt water for the first time, I called at a farmhouse for a meal. It was almost six o'clock, and I was something to eat. French clams were a novelty for me. You had to peel with a knife, scrape the flesh from the shell then swallow it like a raw egg. If you can't do that, you're out. I had struggled with three of them, and I was glad you came along, and they would have been spoiled by morning."

Quebec City

An afternoon and evening are too short for Quebec. I climbed the Citadel for sunset. Several hundred feet beneath, a lazy stevedore pushed his way down the stairs. I watched it pass the landing place of Charter, and then of Wolfe's army. To the left lay the city of Abraham, to the right the walls and fortifications of the French Regime. As the sun set upon the ancient city with its steep narrow streets and cobble-stone pavements, a bugle sounded from a nearby barracks. Out of this fairy land of beauty and old buildings, the bugle recalled the reality of world conditions and the war. That night I took the train for New Brunswick as there is not enough traffic for Thursday. On the train a squadron of Canadian sailors kept most of us awake.

On the same train I saw Canadian, Canadian Canadians were on their way to Europe for a holiday. One of them was a Danish boy, and he was a Danish Folk School and Agricultural College. He read Shakespeare and Shakespear. Such men will make our country great.

Stranded In Truro

Railway centre, and county town of Colchester, Truro is the seat of the Nova Scotia Agricultural College. Mr. Collins, director of Extension at the college, explained the boys' and girls' work and some farm problems in the province. The farms are small and scattered, often subsidiary to lumbering and fishing. The farms are seldom as good as a farmer as in a thick settled farm area where great specialization makes for a uniform product as in the Annapolis Apple country. The large farms, with few towns to consume the product, three provincial governments, and high cost of freight to the rest of Canada add to the farmers' problems.

Truro must be Scotch, for I have waited on its outskirts almost six hours for a ride. "Where are you from?" an old fellow asked me.

"Ontario."

"How are you travelling?" "This way," I said, "wriggling my thumb." "Well, I couldn't travel decent, I wouldn't travel," and he walked off haughtily.

I've been on this corner so long the children all know me by name. To break the monotony I organized foot races among the boys and girls, and the winner was a boy named Xavier. He was known around the world for his adult education and co-operatives. I'll get a ride, and I'll describe this work in my next letter.

Lagging Behind

Ascertaining Canada was "seven years behind in the training of the worker," Prof. W. A. Macintosh of the national employment commission, said the Dominion should sponsor schemes for "physical, moral and spiritual reconditioning" of her jobless.

A sensible man doesn't care if he isn't good looking; he knows that there are others.

The United States to-day leads in initiative in type face designing.

RHEUMATIC PAINS ARE TORTURE.

Don't let rheumatic pains make your life miserable. Potent pain relievers are available. GIN PILLS drive out these poisons by acting on the kidneys so they can filter the blood properly, "poison their own" through their work.

GIN PILLS FOR THE KIDNEYS

THE YELLOW BRIAR

A Story of the Irish on the Canadian Countryside

By PATRICK SLATER

By arrangement with Thomas Allen, Publisher, Toronto.

CHAPTER VII.—Continued

As I lay stretching myself on the broad of my back after the cozy sleep of the night, the thought of the schoolmaster came to scatter the fairness of the morning. So, with an old broom on my shoulder and much fear and trembling in my heart, I set out bright and early to make a call on Mr. Michael Hughes, the local schoolmaster. With any ugly, hard job on hand, I have always figured that nothing much is gained by just burning up daylight. The ground was frozen hard.

A few years before, the settlers had got together and put up a log schoolhouse on the townline, a tidy step down from the Marshall farm. One foot-loose itinerant after another had turned his hand to school teaching, and earned a few shillings the quarter for each scholar who trudged down to his classroom to get a little learning. But bright shillings being a scarce commodity in Mono, the schoolmaster shifted round weekly from family to family, fetching the cream of local gossip with him, and getting bed and board and the trifling cash that came his way. And, at the table, the housewives usually found that the man of letters was a man of parts. The younger children were somewhat regular in their attendance, but, in the late fall and winter time, big clumsy youths as a rule went also to the local school to learn to write and figure. Many of them had hair showing on the face, and the diseases were common among them for which scratching and sulphur are the principal remedies. They came packed with a lustful devilment that sometimes overtaxed the strength and courage of the schoolmaster. One after another the teachers had been beaten up, and had tackled the job of teaching the Mono school. His was the tall, lank figure of a man, neither young nor old, but of five and thirty which is, of course, a sore old age to the mind of any child. His body was as lithe as a gad and as supple as the wind. His features were cleanly chiselled on fine, yet robust lines, and a soft, silken-like beard hid a mouth that was gentle, even to weakness. He thrashed civility under the skins of the big yokels that fall; and so established himself securely as master of the school. Old Hickory Mick earned himself a terrible reputation among the plow boys of Mono as a disciplinarian and wielder of the cane.

The business of boarding around as a nuisance to the farmers' wives did not fit in with his notions of comfortable living; and the master promptly solved the problem by moving into a small log house that had recently been built on a curiously steep bank hard by to the west of the school. There was little household trumpery about, but sufficient for his purpose. The parents of his pupils paid most of the school fees with food and firing. The steepness of his land was such that no plowman has ever turned any of it over. Years after, the little plot was occupied by Jimmie Buchanan, a cobbler who kept bees; but in the master's time it was covered by a scrubby growth and crowned by a gnarled old thorn-tree. Folk called his place Whistling Hill after Knock-na-feadaie, in County Down. All the children knew the master's was a gentle place, and greatly beloved by the little people. One Halloween night, the separate passers-by saw lights, like tiny ribbons, dancing on the hillside below his cabin; and there were soft, piping sounds also heard about the place, like the small, thin whistle a drake gives after ducking himself in a pond.

I found the one door of the schoolmaster's house slightly ajar; and, sticking my head in, I saw the man's back as he stooped over the fire-place, cooking his breakfast in a big black, frying pan. With the broom still clutched in my hands, I stole in, and quietly sat down on a short log. I kept my mouth tight shut to hold my heart from popping out.

In a moment's time, Old Hickory Mick swung around, holding the long-handled spider aloft. He gave his

head a startled jerk in the air as he spied me sitting there. He looked like to eat me all up without a grain of salt.

"You little red-headed son of Belial!" he shouted at me, "how dare you set foot in my house without knocking at the door?"

"Oh, sir!" I said, "that's not my name. I'm Paddy Slater, sir, and I've come down," said I, "to look after things at the school, and to rid up your dirty old cabin, sir."

"The man from me with a hard stare.

"The hole of my coat!" he exclaimed, after thinking the thing over. "Who gave you instructions to come down here?"

"Oh, sir!" said I, "it was Mrs. Marshall, sir. She said I might stay at her place while I rid up your dirty old cabin, sir."

"There was a pause.

"Are you frightened?" the man asked me, screwing his mouth up with a wry smile.

"Yes, sir," said I, "I'm scared stiff you will beat me with a stick. But she said I was to rid up your dirty old cabin, sir. So I just upped and in."

"Well, Paddy," the man told me after a further pause, "the Greeks had a brave word for a lad who feared a danger, yet strode out to meet it."

"Yes, sir."

"And speaking of words," he thundered at me, "it's a careless little liar you are to call my house a dirty old cabin!"

"Yes, sir."

"It's not an odd, dirty cabin, I'll have you know, because it is only recently built."

"And it is not a dirty cabin, I'll have you know, because it is sweet and clean—though perhaps a trifle untidy."

"Yes, sir," said I.

"And it is not a cabin at all, I'll have you know, because it has boards on the floor."

"Yes, sir," said I.

"He shook the pan at me.

"I keep a stick to beat careless little liars with!"

"Yes, sir," said I.

"And I'll have you know, no person comes into my house like an old sow rooting for swill," he told me.

"Get out the door," he ordered me, speaking very sternly, "and come in with your manners on."

"So I upped and out; and then I knocked good and loud on his door.

"Oh! good morning," said the man to me, "I thought you would have run away."

"Good morning, sir," said I, touching my cap. "My name is Paddy Slater, sir; Mrs. Marshall sent me down to do your little services, sir."

"Come in, you unlucky penny," said the master with a little merrily, "come in; and, in the absence of anything better at hand, sit yourself down on that short log."

"Very kind of Mrs. Marshall, indeed," said he. "She is a very charming lady, indeed, is Mrs. William Marshall."

"Yes, sir," said I. "I'd die for her," said I.

"And perhaps," he continued, "you might like the price of your trouble for coming down so early in the morning. How would you like a taste of these delicious little trout?" he enquired, poking the pan under my nose.

"Oh! sir," said I, "I am a growing boy."

"Very neatly put," the man remarked. "So clearing the corner of the table, Mr. Hughes used a sheet of The Globe newspaper as a cover for two plates."

"Ah! ha!" he told me, "you see how we do things among the hills of Mono."

The globe is as round as a ball, yet we dine on the globe. In this bachelor's hall.

"Draw to! draw to!" he urged me, "and salt and pepper to your taste and liking."

It was a case of heel, toe, down they go—heads and all.

"If you dine often with me, Paddy Slater, you will soon become a man of parts," the master informed me, "and to start your education, let me instruct you that such speckled beauties as these were first cooked by Venus with her own hands on the hills of Helicon; whence comes the pretty legend that a mess of them works a love charm."

Michael reddened his pipe in the saucer; and the man blew tidy smoke rings as—sat talking and conversing together. It was heart-lifting to Paddy to be sitting there in the company of the great man without a care or trouble in the world.

On a sudden, the master leapt up. "Let us be off on our way to the school in the name of God!" he exclaimed.

And the master and I then set off to fix the fire at the schoolhouse. He was in fine spirits, but was singing a mournful song:

MY COLLEEN RUE
But dearly and dearly
Thy heart is in loving by
And dearly and dearly
It bears my lonely sigh,
Far from wild Niagara
To Inny's sparkling wave of blue,
To the homestead in the fairy glen,
And gentle Colleen Rue.

He was a spirited man, and as straight as a candle. To keep up with him, I took grown-up strides beside him, thinking I was now myself quite a man entirely.

It was in this wise that I fell in with Old Hickory Mick, and I served the master faithfully for the next

Five years. I was the only confidant the solitary man had; and he opened his heart and mind freely to me because he knew I liked him. Yet, to the day he buried him, at Connewville, his past remained a mystery so far as I was concerned. My own fancy has always been that Michael Hughes had clean forgotten it himself. Everything in his life story stood out sharp and clear back to a jaunting car ride in Dublin town; but at that point the thread of memory seemed to have broken. The man brought a wealth of learning and personality with him from behind that veil of oblivion; but so far as his personal conscious life back behind him was concerned, he knew no more about it than does a babe at its mother's breast. After the father undertaker gets me, I pray, Father in heaven, that on my awakening, no such loss of memory may be any chance overtake poor, old Paddy Slater. The thought is surely cold comfort to me that my spirit beyond may have perhaps forgotten the poor mortal here below.

Michael Hughes paid me in full the price of all my trouble. The man took many pains to teach me. He may have been an indifferent teacher at times over at the log schoolhouse. The material on which he wrought was often coarse and discouraging. From what I saw of his teaching over there, he did seem at times, however, to have the faculty of arousing the interest and holding the attention of the little children. It is true they got their knowledge in small doses; but there was plenty of pep and dash while he kept them at it. And what he gave them was actually theirs for keeps. At the first sign of listlessness he promptly bundled the small bodies out to tumble about in the fresh air. In his crude and simple theory, the teacher was wasting his time unless he actually holds the pupils' fixed attention. And, in his opinion, twenty minutes was a long time for a young child or an old man to keep his undivided attention fixed on any one thing. In any event, for the first year, I got my instructions at Whistling Hill and not in the classroom at the schoolhouse.

(To Be Continued)

Kept Telephone Busy

People Excited Over Idea Moon Was Changing Its Position

Astronomers are not like premiers and police chiefs who sometimes have their phones disconnected so they may snatch a little sleep. But the other night Dr. H. Spencer Jones, British Astronomer General, had to have his telephone removed altogether before he could rest.

At a meeting of the board of visitors at Greenwich Observatory he had announced that the moon is moving in its calculated position. It was further off its course, as prescribed by mathematical calculations, than at any time since 1680. When the word got about, half of England wanted Dr. Spencer Jones' personal assurance something awful was not about to happen. It was explained that the system of mathematics is not sufficiently accurate to calculate exactly the position of the moon in advance.

However, it was explained the astronomers could tell where the moon was going to be 20 years ahead within two seconds, which ought to be good enough.

Wheel Of Plane Found

Believed to be part of the aeroplane used by Sir Charles Kingsford-Smith and his co-pilot J. T. Pethbridge on their fatal flight to Australia in November, 1935, an aeroplane wheel with tire and axle was recently found near Moulmein, Burma.

A man's value in the world is estimated and paid for according to the ability he uses—not what he may possess.

A police surgeon in Philadelphia says one is sorer if he is able to say, "Susie sat in the soup."

Eighty per cent. of tornadoes occur between the hours of noon and 6 p.m.

BRITISH NURSES FLY TO TEND NAZI WOUNDED

Four Army nursing sisters were flown from England to Gibraltar in two R.A.F. Flying Boats when word was received that the German warship "Deutschland" had been bombed by Spanish planes and had put in to Gibraltar with eight wounded sailors. This picture shows two of the nurses on the plane preparing to leave Calat late at night.

Arctic Broadcast

May Bring Voice Of Arctic To Canadian Listeners

Feasibility of broadcasting from the Arctic to a national book-up will be investigated this summer by experts of the Canadian Broadcasting Corporation who will accompany the eastern Arctic patrol which sails from Montreal in July on the steamer ship Naosco. It is not the intention to do public broadcasting from the ship this summer but to try out shortwave communication from different points the ship calls at and canvases the possibility in subsequent years to bring the voice of the Arctic to Canadian listeners.

To enable his army to cross the Tigris and Euphrates rivers, the emperor Julian had built a bridge of boats made of skins stretched tightly over oster frames.

Stream Lining And Diesel Engines Produce New Fast Records

During the past two years, new railway speeds have been increased in all lands, due particularly to stream-lining design and Diesel engines, although some remarkable records, undreamed of a few years ago, have been made by steam locomotives.

The announcement that the Broadway Limited between New York and Chicago will, with a new locomotive now being built, travel at a sustained rate of 100 miles per hour, is not, in itself, a record of modern progress, surprising. The attempt at such an objective was almost inevitable. The present time for the distance by the Pennsylvania Railroad is 16½ hours, under the proposed schedule this would be reduced to 14½ hours, the distance being 910 miles.

At present the German State Railways hold the first half dozen or more long distance speed records with Diesel trains, the best being between Berlin and Hanover, 158 miles, at an average speed of 82½ miles an hour—Stratford Beacon-Herald.

Heavy Flying Boats

Ship Weighing Thirty-Five Tons For Atlantic Air Service

Flying boats weighing approximately 80,000 tons (about 35½ tons) are being designed for the Atlantic air service, it was learned in London.

The ships to be built by Short Brothers, the posthumous or three years expected to be ready for trial flights in 1939. They will have a cruising speed of 180 miles an hour and will be twice the weight of the Caledonia and Cambria, types of flying boat at present being used on Imperial Airways air routes.

The new flying boats will have accommodation for 20 passengers and a small quantity of airmail.

Easy To Dispose Of

Issue of stools used in Westminster Abbey for the Coronation ceremony has been overabundant. The stools were offered for sale by the Office of Works along with peers' chairs. In most cases the chairs and stools were sold to the persons who had used them. The Office of Works is also selling 66,000 red and blue cushions from the Coronation stands, and lion and crown decorations.

U.S. Investments in Canada

Huge Total Of Four Billion Dollars Invested Here

The \$4,000,000,000 American investment in Canada and the two-way movement of industry between the two countries were considered in an intense round table session of the second conference on Canadian-American affairs held at Kingston.

Involved in the discussion were a complexity of factors such as gold values, effects of tariff adjustments and trade treaties, Canada's increased vulnerability to sudden pressure because of an influx of American "hot money" and kindred variants.

Added to that was the news that while Canada's exports had returned practically to normal, her national income was still lower than the lowest year in the 1920's.

Prof. K. W. Taylor, McMaster University, Hamilton, Ont., told the conference Canada's per capita investment in United States industry was larger than the American per capita investment in Canadian industry. Industries expanded across the nearest border because it was the natural place for them to expand.

Search for cheaper labor played little effect in American industrial investment in Canada because while wages were slightly lower here, they were considerably lower in Quebec than in Ontario, but branch industries usually settled in Ontario, he said.

"In recent discussions of the form of labor organization in Ontario it has been suggested that if we have only nice labor organizations, if they will keep quiet and not give trouble, we must make a far found in our here for peace, order and good government," Prof. Taylor interjected.

Analysis of American industrial investment in Canada showed dominance in lines where American technology dominated the world, where concerns produced nationally advertised branded articles and in raw material production such as pulp and lumber. There was no substantial American investment in Canadian railways, banks, small scale industries or service industries.

"The paradox is that in an attempt to prevent American penetration we raise tariffs and grant imperial preferences which are the very devices which encourage establishment of American plants here," he said.

Herbert Marshall, chief of the internal trade branch, Dominion bureau of statistics, said American investment in Canada totalled \$4,000,000,000, of which \$2,200,000,000 was in manufacturing, \$1,800,000,000 in mining and \$800,000,000 in other branches. There was \$1,700,000,000 invested in branch plants altogether.

This huge total of foreign investment involved heavy payments of dividends and interest which were a great drain on the country. About \$50,000,000 flowed back and forth across the line continually, in various forms, which he held, was a tremendous amount to Canadian economy. Such matters should be considered in devising tariff policies, he suggested.

About Honey

Colour Is Not A Factor In Honey Food Value

The increased use of honey, as a food, for instance, and as a developer of energy for athletes, and an ingredient in home cooking, has not yet dispelled many popular fallacies connected with it. Contrary to general opinion, colour does not affect the food value of honey in any way. Honey varies in colour, from water-white to a very dark brown, according to the kind of flowers from which it is gathered. The difference in colour is caused by certain substances in the nectar of different flowers that absorb the rays of light in varying degrees.

The favours of honey vary just as much as its color; and there is no difficulty in finding a flavour to suit the most discriminating taste. As a rule, the lighter the colour of the honey, the more delicate is its flavour. Therefore, when honey is to be substituted for sugar in cooking, it is the light-colored honey that are recommended. When honey is used in place of jams and marmalades, each and every colour or flavour has its advocate.

Granulation of honey, as many people seem to think, is not an indication of adulteration. Rather, it is a sign of purity. All Canadian honey granulates sooner or later, depending largely upon the proportion of the two invert sugars it contains. The greater the proportion of levulose to dextrose, the longer the honey will remain in liquid form. Levulose, or fruit sugar found in honey, is non-granulating and is the sweetest and so far found in nature. It is usually the predominating sugar in honey. Dextrose, or grape sugar, is a rapid granulating sugar, and is predominant in commercial syrups. Granulation of honey is hastened by low temperatures and high temperatures retard it.

Honey sold in glass containers is usually heated when packed, for the purpose of keeping the honey liquid for as long a period as possible. Rapid granulation usually produces a fine texture while slow granulation tends to coarseness. Granulation can be brought back to its liquid form by standing the container in water and heating it to 150 degrees Fahrenheit. A higher temperature is likely to darken the color and drive off aroma and flavour. Further information on honey will be found in bulletin "Honey and Some of the Ways it May Be Used" which may be obtained free on application from the Publicity and Extension Branch, Dominion Department of Agriculture, Ottawa.

Children Go Without Books

Libraries In Moscow Report Shortage Of Suitable Reading

So acute is the shortage of children's books in Moscow that parents and children actually go to the author's house and ask permission to copy in manuscript some of his works, and other books in his possession.

A popular children's book was published recently in an edition of ten thousand copies. In Moscow Province alone there are 3,115 children's libraries, and Moscow got 400 books for approximately 200,000 children.

The Communist Party newspaper Pravda attacks the book publishing authorities the children's bookshop and the paper industry. "In Moscow," says the newspaper, "in the model shop for hydromechanics, one word is heard from morning till night—'No.'"

"The customer asks 'Have you such and such a book and the answer is no. On April 13 alone one of the girls at the shop—there are 20 of them—asked for 475 titles. The newspaper then states that the Soviet paper industry is handicapping the cultural and literary progress of the country. It cites figures showing 'outrageously low work in the paper factories.'"

The industry is now 34,000 tons behind the production plan as a result of constant breakdowns of machinery. In some factories bolts and other objects are stated to have been found in the machines.

Waiting For The King

Amusing Story Told By Edward VII. Concerning Himself

King Edward VII. used to tell a funny story of how, after lunching one day at David Sassoon's house, he left on foot and was asked the time by a small boy waiting outside.

"Just half past three," he answered.

"Well, sir," said the boy, "they say the bloomin' old King is inside that house. I've been waiting for an hour to see 'im come out, and I ain't going to wait no longer; 'a ain't worth it."

"I quite agree with you," said King Edward, laughing, "but there's no need for waiting any longer. I'm the bloomin' old King."

The Tourist's Dollar

How is the tourist dollar distributed, Motor Magazine makes the split as follows: Miscellaneous purchases at stores, 25 per cent.; transportation, 20 per cent.; hotels and other lodgings, 20 per cent.; restaurants and other eating houses, 21 per cent.; amusements, 8 per cent.; confectionery, 6 per cent.

Horiculturists have dreamed of a thornless rose for years, and now it is a reality. Such a rose was raised at Attica, N.Y., recently.

One of the newest and best pictures of Princess Margaret Rose, younger daughter of the King and Queen, shows her as she put a cake at a recent Coronation Tea Party in London.

To Create Better Feeling

Breaking Down Of International Prejudices Is A Splendid Thing; English Is Going English; English Is Going American.

There is a general feeling of internationalism in the minds of the people of the world. It is a splendid thing. In fact from this peculiar phenomenon we may draw a great moral and detect in the needs of hope. For such, after all, is the only true internationalism.

—which must spring from a community of interests and a coincidence of tastes. We understand a fellow who wears clothes like ours and who plays bridge according to the conventions which we observe—we understand him, and he understands us.

We look forward hopefully to a time when this tendency will spread across the barriers of language. We look forward to a time when Frenchmen will no longer be "Froggies" to those provincial souls who pass their lives in Suburbs and other London suburbs; a time when Englishmen will not be regarded by the Germans, Swiss, Italians, French and Slav as wandering dolts incapable of saying more than "Yes," "No," "Thank You," and "Good-bye" in any tongue other than their own; a time when Americans will be recognized throughout Europe as civilized and well-informed persons, and Europeans will be recognized as good sports in all America.

We look forward to a time when we shall be able to enquire the globe without attracting hostility or curiosity, and when even cannibal kings will find a welcome in our homeland—Hamilton Spectator.

Higher Railway Speeds

Stream Lining And Diesel Engines Produce New Fast Records

During the past two years, new railway speeds have been increased in all lands, due particularly to stream-lining design and Diesel engines, although some remarkable records, undreamed of a few years ago, have been made by steam locomotives.

Jessie Matthews At Avalon

As the feature of a big double bill coming to the Avalon Theatre on Thursday, Friday and Saturday of this week, Jessie Matthews, the celebrated dancer, will be seen in a snappy musical comedy, "It's Love Again." This is a British-made picture which can hold its own anywhere and is comparable to anything that has come out of Hollywood. It is a bright, delightful and amusing affair that is certain to please, for it has an abundance of good comedy and the music is away above the average.

On the other half of the bill, Geo. O'Brien stars in "Daniel Boone," a picture which vividly describes the pioneer days on the frontiers of North America.

Blackfalds

BLACKFALDS.—Rev. R. B. Layton presided his farewell sermon at Blackfalds on Sunday last. This service also witnessed the christening of Mr. and Mrs. Delbert Krause's little son and daughter. The United Church at Blackfalds will be closed until the first of September, when Mr. Layton's successor will take charge.

Mrs. E. M. Relvaig, her sister, Mrs. Rasmussen, and her daughter, Mrs. Lobdell from Los Angeles, who is here on a month's visit, attended the Seventh-day Adventist Camp Meeting in Lacombe last week.

E. G. Hale motored down from Edmonton and spent the week-end with his family here.

Mr. and Mrs. Kenneth Dane are home again after marking papers.

John Pickering recently underwent an operation for appendicitis in Bentley hospital.

Visitors From Spokane.
Mr. and Mrs. Allison and daughter from Spokane are visiting Mrs. Allison's mother, Mrs. Capron, for a couple of weeks.

Mrs. Edith Bill came to town last week to help Mr. Moir with his booth at the Red Deer Fair and is remaining there until after Sports Day. Her daughter Evelyn is in town, too, while her sons, Aubrey and Ashley, are at Switzer's and the Rotary Camp, respectively.

Among those who were guests of the agricultural committee at the Red Deer Fair were the following: Ava McKay, Dorothy Miller, Ralph Wade and Bert Warren of Blackfalds.

Mrs. Chris Ellis has her nephew, Jackie Westlake of Calgary, staying with her for the summer months.

Laurence Martin recently underwent a minor operation on his ear.

LOCAL GIRL WEBS

IN VANCOUVER, B.C.

A wedding of interest to many people in Lacombe and district took place on Friday, July 23rd, at Vancouver, B.C., when Pearl Joy, daughter of Mr. and Mrs. H. W. McArthur, was married to Mr. Bennett Blane Brower. They have taken up residence at 2218 1/2 64th Ave. East, Vancouver, B.C. Friends and acquaintances of the bride here join in extending them best wishes.

Clive

CLIVE.—The fine weather of the past week is boosting the grain and gardens along very fast. Some fields of wheat will be ready for harvest in about 10 days or two weeks.

L. W. Ditzler and family returned home Friday last from a visit to Mrs. Ditzler's mother at Regina, Sask.

Miss June Tompkins of Calgary is visiting her father here.

Recent visitors to the Clive district were Mrs. and Mr. Ezra J. Allison of Spokane, Wash., and their daughter, Miss Claire Allison of Portland, Oregon, who formerly lived in Pleasant Valley. A picnic was held at the Scott cottage, Sylvan Lake, where a number of old friends and neighbors of the Allison's called to visit with former friends.

Quite a number from here attended the Red Deer Fair on Friday. The Cunningham family spent Sunday at Gull Lake.

Morningside

MORNINGSIDE.—Mrs. Stephens and daughter, Miss Irene, arrived home last week after a very pleasant trip to the coast and to the United States.

Rev. R. H. Brett, a former pastor at Morningside, and his daughter, Mary, visited with their Morningside friends last week. Mr. Brett left here seven years ago and has been stationed at various places since that time. He is taking a year's rest and with his family will reside in Vancouver.

The Good Cheer Club held a very pleasant meeting at the home of Mrs. E. Ochs last Thursday. Arrangements were made to have a bazaar in the Fall. There were 20 members present.

Art Bowie had the misfortune to cut his leg quite badly while working in the bush last Saturday. It required several stitches to fix up the wound.

Gull Lake

GULL LAKE.—The opening dance of the season at Fernie's Hall, Aspen Camp, was well attended. Carl Werth's Orchestra from Edmonton will play each Saturday from 9 to 12 o'clock in the evening.

On Sunday last, two games of softball were played at Lakeside Camp. In the first game, Iowalla took the game with Lacombe. The second game was an exciting one, in which Forabee beat Iowalla. A good crowd gathered to see the contest.

Mr. and Mrs. Hans Hansen returned on Monday evening with Mr. and Mrs. Len Beddoes from a very enjoyable trip to Washington and Idaho.

Master Calvin Hansen is attending the United Church Camp.

Attended Camp Meeting
Many families from this district attended the Seventh-day Adventist Camp Meeting at the College near Lacombe last week.

The Gull Lake School House is being altered, re-decorated and cleaned for the new term. E. W. Dowling is the teacher.

Clarence Eklund and Bill Card of Ponoka motored to Banff the first of the week.

Miss Dorothy Moore returned from Portland Saturday from a six weeks' visit with her parents, Mr. and Mrs. E. C. Moore.

Oscar Johnson of Hanley, Sask., is a visitor at the home of Dick Cox. Dick Cox is busy repairing wells in the village.

Bentley

BENTLEY.—Frank Roberts of Calgary is spending two weeks' holiday with his sister, Mrs. M. S. Withrell.

Mrs. C. C. Miller and son of Edmonton are visiting at the J. F. Miller home.

Mr. and Mrs. G. Sanders of Claresholm arrived last week to take over the drug store formerly operated by W. F. Johnston. We welcome Mr. and Mrs. Sanders to our village and wish them success.

Glen Williams of Calgary is at the home of his parents, Mr. and Mrs. B. E. Williams, for a two weeks' vacation.

Mr. and Mrs. F. W. Thorpe visited their daughter, Mrs. Garmel of Calgary, for the week-end. The Misses Marjorie and Bernice Withrell, who accompanied them, remained for a short visit with their grandmother, Mrs. Roberts.

Thanksgiving Day

To Be Observed
Monday, October 11

Thanksgiving Day this year will be observed on Monday, October 11, according to a proclamation issued in The Canada Gazette. The date is set as a day of general Thanksgiving to Almighty God for the bountiful crop and other blessings with which Canada has been favored this year.

Last year, Thanksgiving Day was observed Oct. 12.

The World of Wheat

By H. G. L. STRANGE
Director, "Crop Testing Plan"

"The desert shall rejoice, and blossom as the rose." — Isaiah 35-1.

Comforting at this time are these words from the Book of Isaiah, and they are reassuring, too.

Some are telling us that a large part of the West is now a desert, and will never grow good crops again. These good people, I believe, are mistaken, for the history of our prairies, it seems, reveals clearly that years of drought, in the end, succeeded by years of good rainfall, and that on the average, over a long term, sufficient rain falls to produce profitable wheat crops, on at least 20 million of the 24 million acres in wheat on the prairies.

It is true, of course, that periods of drought arrive. To tide over these we must try to conserve our resources in the wet years.

There are, however, four million acres on our southern prairies where insufficient rain falls, on the average, to produce wheat profitably. This area, however, even in the driest years, would grow grass that in turn could produce cattle and sheep profitably.

Presently then, and provided the land is put to a proper use, we may be certain, as we are assured by the Book of Isaiah, that once again "The desert will rejoice, and blossom as the rose."

Following factors have tended to raise prices: Small Argentine and Danubian shipments; rust, high temperatures and grasshoppers prevalent in U.S. Northwest; seeding is late in Argentina; European political situation still very unsettled; pessimistic grain reports from Germany with large deficiency mentioned; considerable rust infection in Manitoba.

Following factors have tended to lower prices—Broomhall calculates Northern Hemisphere wheat crop except Russia and China will be 272 million bushels greater than last year; good rains in Australia, Russia, Argentina and Western Canada; Russia offers barley for sale; world demand for export wheat very disappointing, chiefly on account of deficiency of foreign exchange; Italy's almond production large.

Pigeon racing is now well established in Western Canada.

Chigwell

CHIGWELL.—Mr. and Mrs. Larson from Wetaskiwin are visiting Mrs. Larson's parents, Mr. and Mrs. Lemson, for a few days.

Mr. and Mrs. Don Waldron were visitors at Tees on Sunday last.

Mr. and Mrs. Fife and daughter Elsie spent Sunday at Scott's cottage at Sylvan Lake.

Rex Waldron was visiting his brother Don last week.

A. E. Willson and Clarence McCallum spent Monday and Tuesday in Calgary.

Mr. and Mrs. Alex Willson motored to Calgary on Tuesday to spend a few days with Mrs. Willson's sister, Mrs. Cooper.

Mrs. Floyd Willson, Mrs. A. E. Willson, Mrs. Martin and Ward Willson spent Monday afternoon in Red Deer.

Tom Lockery and son Donald from Vancouver are visiting Victor Lockery's for the next two weeks.

Mrs. Foran's niece from Florida is visiting in Chigwell at present.

Mrs. Lisher and daughters are spending the week at Gull Lake.

About six adventurers are known to have made the complete trip by small boat from the source of the Columbia River to its mouth.

New Kidney Remedy

WORKS WONDERS

They Flush The Kidneys

For years chemists have been experimenting on a kidney remedy that would really flush out the thousands of little filters that become clogged. The kidneys must be kept working properly in order to throw off the waste matter.

The new remedy sold under the trade name NOX KIDNEY FLUSHERS removes these poisons through the natural channel, thus preventing the poisons from entering into the blood stream. They actually cleanse these filters in the kidneys, and almost immediately the backache disappears.

They allow you to have restful nights, and the entire urinary tract is made antiseptic. There is no need of nursing a backache. After a few days' treatment, you will notice a vast improvement in your general health. Your eyes become clear and bright, your headaches disappear--no more getting up at night.

Nox Kidney Flusher is in tablet form and each package contains one month's treatment. If you suffer from any disorder of the kidneys, the One Dollar spent for the month's treatment will be the best dollar ever spent. Get Nox Kidney Flusher today from:

Sweet's Pharmacy, Lacombe

Report of Alberta Crops Shows Improvement

Survey of Conditions By
Department of Agriculture

A crop report for Alberta, issued by the Department of Agriculture, strikes an optimistic note, as recent rains benefited growing crops, relieving the feed situation.

Brief notes from correspondent's reports follow:

Medicine Hat: Recent heavy rains will help grass and feed situation generally. Possible wheat yield 5 to 10 bushels to south and west.

Lethbridge: Rain nearly 3.00 inches and dry conditions greatly relieved. First cutting alfalfa produced light crop.

Cardston: 92 rain general throughout district and crop outlook improved materially. Possibly 5 bushels added to wheat yield. Range conditions much better.

Calgary: Limited area adjacent to town reports heavy hail damage on July 14. Nearly 3 inches moisture for the week and yield prospects for the district much improved. Prospects for feed much better.

Brooks: Only 29 rain for immediate vicinity in July but heavier rains last week to the west. Dry land about beyond recovery. Irrigated grain about 75 per cent normal.

Youngstown: Had 125 inches rain about July 14. Too late for crop but feed outlook improved.

Calgary: Total rain last week of 2.32 inches practically assures some fair crops and sufficient feed for local requirements.

Rockford: 1.75 inches rain will benefit late sown and re-seeded crops. Summerfallow yield may be 65 per cent. Feed prospects now about normal.

Olds: 2.30 inches rain last week. All crops will benefit, especially late sowings, green, feed and pasture.

Stettler: About 3.00 inches rain last week will help fill wheat but yield not likely to exceed 3 to 8 bushels. Coarse grains and inter-sown crops will benefit more.

Red Deer-Lacombe: Recent rains between 5 and 6 inches. All crops will benefit greatly. Feed supply seems assured.

Leduc: Local showers had helped crops south and west before excessive heavy rains of last week. Fair crops and feed supply in entire district now expected.

Sedgewick: 1.2 inches rain will improve crop by 50 per cent. Late sowings will benefit especially. Ample feed seems assured.

Vermilion-Lloydminster: Precipitation only half to three-quarters of an inch last week but wheat filling nicely, with prospect of fair yield. Early coarse grains light but later sowings better.

Willowdale: Recent good rains have relieved unfavorable dry conditions. Some fair crops now in prospect, especially late grains.

St. Paul: Nearly 3 inches recent rain has assured fair crop and no further worries re feed situation.

Smoky Lake: About 4 inches of rain last week relieved dry conditions, which had become serious. Some fair crops certain, especially later ones, and feed situation improved enormously.

Westlock: Recent rainfall nearly 6 inches and gives good reserve. Only half a hay crop but good crop of green feed now expected. Original estimate of half crop of wheat will be increased considerably.

Athabasca: Three inches of rain will improve all crops, practically assuring fair yield. Feed situation much improved.

Grande Prairie-Beaverlodge: Only occasional light local showers for the past month and conditions exceptionally dry. Only half wheat crop expected. Rain urgently needed by all crops. Wire worm damage unusually heavy.

Berwyn: Same generally dry conditions as south of the river. Fair to average crop in Battle River area but very light in other districts.

The moon has about 30,000 craters, some of them spreading more than a hundred miles.

GASOLINE USERS PAY

HIGH TAXES IN CANADA

The present average price to the consumer over all Canada for gasoline sold for use in motor vehicles, including all taxes, is 28.03 cents a gallon.

The total tax content per gallon is 7.8 cents. In other words, when a consumer buys 81 worth of gasoline, he pays 27.83 cents in taxes.

This figure includes taxes which a recent computation points out are capable of being easily determined, those that can be directly charged by those handling gasoline in one or other of its various stages on its way to the consumer. In freight bills, in motor trucking, in the dealer's spread, and perhaps in half a dozen other ways, there is concealed taxation which ordinary processes of computation cannot easily segregate. Presumably, even if this were done, the total chargeable against each gallon of gasoline would not be much greater, but nevertheless it would be something.

Naturally the price of gasoline varies in the different provinces. It is these differences in cost to the consumer which result in the lower tax content per gallon dollar in Alberta and Saskatchewan, for instance, than in Ontario, in spite of the fact that the rate of gasoline tax in Alberta and Saskatchewan is a cent higher.

Because of the higher prices in the western provinces, due to higher freight charges, higher crude costs, the consumer doesn't get as many gallons for his dollar.

Tees Tattle Tales

By TATTLER

TEES.—Stanley Pethybridge returned Saturday from a visit to Olds. He was carrying his club bag behind him. He says he got caught on a nail, but it is generally thought that the principal at Olds might have given him a tanning.

Kenneth Montgomery returned after a week at Redway, Alta.

Mrs. Conrad has returned from a short holiday.

Mr. and Mrs. Murphy left Sunday for Red Deer, where they will spend the balance of their vacation. Mr. and Mrs. Murphy hail from Sterco, Alta., and have been visiting Mrs. Ken McLaughlin.

Mrs. Gerald Fry is spending a holiday at Stannore, Alta. and Mrs. Cyril Colebrook at Hughenden, while Mrs. Bruce McMillan is spending her holidays at Teeswater, Ont. Visitors to the district include Fred Meadows, from Athabasca; Max Irvine, from Calgary; Mr. Hanley, from Edmonton; Mr. Craik's daughter and two children, from Calgary, and Mrs. Heath's sister, from Seattle, Wash.

Mrs. Soppitt of Vancouver, who has been visiting her son, Dave, for the past three weeks, left for home Monday.

Tees Wins Ball Game

During the past week, the Tees baseball team motored to Sargents and the boys cut the mustard for a change and brought home a game, the score being 4-2. The game had some very thrilling moments, with bases full, but in all instances the pitcher or team came through with sensational plays, saving the day for Tees.

The Saskatoon and raspberry patches are both receiving plenty of attention these days; nearly everyone who can carry a pail is on the job, and they all report nice big, juicy berries, resulting from the recent heavy rains.

Spring Valley

SPRING VALLEY.—The monthly meeting of the Ladies Aid and the W.M.S. was held at the home of Mrs. Wm. Suitor on Thursday of this week.

Charley and Mrs. Mills are back from a two-month trip to Southern California, Colorado and Nebraska and report a grand vacation. While there they learned the feel of stepping up to 90 miles per hour on the Pacific highway.

Rev. Mr. Kettly is away on his holidays for two weeks.

Mr. and Mrs. Robert Hamsworth were Calgary visitors for a couple of days last week and while there attended a banquet.

Mr. and Mrs. Henry left for their home in California on Wednesday of this week. Their brief stay in our neighborhood has been very pleasant on our side, and we hope that they will come again.

We understand that Mr. Davie Dixon will occupy the pulpit at Spring Valley next Sunday, and the musical for the service will be a vocal solo, "Face to Face," also a violin trio, "Whispering Hope."

Bicycle racing is having a revival in Edmonton.

Westling

WESTLING.—Mr. and Mrs. G. Waldern and family returned home last week from their holiday trip. Relatives from Washington visited Mr. and Mrs. E. G. Boddy on Sunday.

A dance will be held in the hall on Saturday, July 31, starting at 9 p.m.

We are sorry to hear of Miss Mabel Westling's operation in the Edmonton hospital. We all wish her a speedy recovery.

Axel Westling is enlarging his house, which will soon be completed.

Friends from California were visitors at the home of Mr. and Mrs. D. Will on Sunday.

A large crowd attended the dance in the Westling hall on Thursday night.

Mr. Leslie from Eastern Canada was a visitor at the Somerville home last week.

Mr. and Mrs. Ties and son Jamie are visitors at Gull Lake for a holiday.

A number of people from this district attended the Red Deer Fair.

Mr. and Mrs. Russell and Jack May have relatives and friends visiting them from Winnipeg.

Mr. and Mrs. Monson motored to Edmonton this week.

Calgary has a great number of motorcycle enthusiasts.

Swine Industry Second Only To Wheat In Volume Of Trade With Britain

In 1935, Canada exported more than \$28,000,000 worth of pork products to the United Kingdom. This placed the hog producer second only to the wheat producer in importance to this country with respect to volume of trade with the Motherland, and represented an increase in financial return over 1935 of approximately \$7,000,000. When it is remembered that this money was distributed among a very large number of Canadians, importance of this part of our agricultural production becomes apparent. Not only did the hog represent an important source of revenue to farmers but railways, truckers, stockyards, packing plants and allied trades were able to employ more help and pay more wages and so assist in the national re-employment plan. The hog could well be characterized as a national "mortgage lifter."

A uniform lot of Wilthires. Note the finish, balance and ham development

A very encouraging feature of the hog industry is the availability of the world's biggest bacon market to Canada. The Ottawa Quota of 1932 giving us a quota of 280,000,000 pounds of ham and bacon per year, to all intents and purposes, extended in 1937 by the Anglo-Canadian Trade Agreement. On the basis of marketability we still have room for more hogs in Canada. This cannot be said of all agricultural products and is a feature of fundamental importance when considering the expansion or introduction of any industry. It is well to remember that in 1936 we took advantage of only about 55 per cent. of our quota. The following figures, in pounds, indicate the gradual increase in our exports of bacon and ham to the United Kingdom and the distance that we still have to go to fill our allotted quota:

1931	10,961,000
1932	20,893,400
1933	71,524,700
1934	119,707,600
1935	124,327,900
1936	154,768,800

This increasing supply has been getting a very acceptable welcome and sale in the Motherland. We have established regular customers there—people who ask for Canadian bacon and depend on it. We should try to keep these customers. A major factor in keeping them is having a supply

on hand in England at all times. We must try to protect the foothold we now have on this market and our best protection is the appearance of regular supplies. In spite of the fact that feed prices have advanced sharply, producers should make every possible effort to maintain their production, if they expect to grow and sell hogs at a profit in the coming years.

A gradual expansion of hog production, with provision for the maintenance of such expansion would be a desirable thing from a national point of view. The market abhors extremes and the alteration of light and heavy runs of hogs places the industry in a state of jeopardy. The competition for the British bacon market is keen. A number of nations would like to sell more bacon there. If we do not take advantage of our allotted quota, some other hog

producing country will. Other British colonies are becoming interested in hog production. Doubtless our ability to supply bacon to the United Kingdom during the term of the present trade agreement will be reflected in arrangements which the British Ministry make for their future supplies.

Most of the hogs grown in Canada are produced in small groups. Few "hog ranches" or sow herds exist. One, two, or three sows per farm is the extent of breeding stock usually maintained. This relationship of hogs to the farm business is probably the result of long experience on the producers' part and is quite possibly the correct way to produce hogs. When it is recalled that the hog is used to market the by-products of the farm—coarse grains, low-grade commercial grains, dairy by-products, and household waste—it is quite logical that a limited number of hogs would make most profitable use of such products as are usually available. In some cases, producers have taken the attitude that because they only raise a few hogs, the quality of their product does not make much difference. This is regrettable because every producer, no matter how limited his production, influences the average quality. Hog grading was instituted to encourage producers of quality hogs for their care and judgment. It will pay all producers to keep top grades as their objective.

Joke Was On Owner

Keeper Of Fashionable Hotel Had To Pay Luncheon Check

The other day Judith Anderson, the actress, was lunching in the Algonquin. She was alone. When Frank Case, the owner of the hotel, saw that she had reached her desert, he sat down at her table for a chat. "If there's one thing I don't like about my place," he told Miss Anderson, "it is that so many men come in here to lunch by themselves. And that's not the worst of it. When they have finished they get up, look around the dining room for a pretty woman of their acquaintance and begin a conversation. I think the least they can do in return for the pleasure of talking to a lovely woman is to pay for her luncheon."

Miss Anderson called the head-waiter.

"George," she said, "give my check to Mr. Case."

The joke was on the town's tallest, most suave and literate innkeeper, but he loved it.—New York Post.

Need Permits For Nails

Builders in Germany Require Official Sanction For Steel Materials

To build a house in modern Germany one needs not only bricks and wood and cement and architects' implements but, most essential of all, an official permit to use nails, screws, iron bars and steel reinforcements. Smaller private houses and public schemes costing more than \$5,000 and \$25,000 respectively, will "upon application" be supplied with iron "according to quantities available," whereas construction plans under that limit do not have to apply for special permit.

Eating wolf meat and finding it good is the latest exploit of a Serbian peasant who has gained a reputation for consuming animals raw and birds with their feathers on.

The whale shark, largest of all sharks, has the smallest teeth, but he has 8,000 in each jaw.

Valuable Manuscripts

Unpublished Letters Of Elizabeth Browning Bring Good Price

Manuscripts and unpublished letters of Elizabeth Barrett Browning, of her romance and runaway marriage with the poet, Robert Browning, brought \$15,000 at public auction in London.

The letters were part of the collection of Mrs. Browning's nephew, the late Lieut.-Colonel H. P. Moulton-Barrett, which was ordered sold by his executors.

A letter written by Miss Barrett at the age of six to her mother brought \$110; 113 letters to her sister Arabel, \$4,750, and 57 letters to her brother George, \$1,700.

The collection is considered to be the most important group of Browning's own papers were sold in 1913 for \$139,680.

Some Of The Worst Weeds In Canada Can Happily Infect A Farm

The greatest difficulty in maintaining successful farming, and particularly in producing a more abundant supply of clean forage and grain seed, is the prevalence of weeds. New weeds are introduced on farms with imperfectly cleaned cereal, clover, and other commercial seeds, and with commercial feedings stuffs, which often contain vital weed seeds. These seeds are spread from district to district through the various transportation facilities, are disseminated within a locality in stable manure from towns and cities, and are distributed from farm to farm through threshing machines, and from field to field by farm implements. The wind carries weed seeds long distances; streams disperse them along their courses, and herbivorous animals and seed-eating birds help to spread the evil broadcast.

It is important to consider not only the large number of weeds sown with improperly cleaned grain but also those already in farm soils. Some of the worst weeds in Canada are so prolific in the production of seed that relatively clean fields may become badly contaminated in two or three years if these weed seeds are allowed to go to seed. For example, a single plant of wild mustard, stinkweed, foxtail, pig-weed, or campion produces from 10,000 to 20,000 seeds; shepherd's purse about 50,000, and tumbling mustard about 1,500,000.

With such productivity, seeds become quickly infested with weed seeds, although the presence of the seed is not fully realized at the moment, owing to their inconspicuousness. Only a careful examination will reveal their kinds and numbers, and with this object in view the Seed Branch of the Dominion Department of Agriculture gathered information on the prevalence of weed seeds in farm lands. Part of this work is to be found in bulletin 137 "Weeds and Seed in the Field," an 80-page illustrated publication which deals fully with the weeds in the Dominion. The bulletin may be obtained free on application from the Publicity and Extension Branch of the Department at Ottawa. Much information is also given on seed cleaning and seed cleaning accounts.

Idea For Use Of Newbys Is Also Good Advertising

Newbys in Philadelphia wear electric signs that flash across their chests the name of the paper they represent. The sign not only has a strong advertising appeal, making it easy to "spot" a newby in a crowded street at night, but it protects the boy selling papers in automobile traffic. To be practical, the chest lamp had to be shockproof and operate on a portable battery. The name of the newspaper is made of a single continuous tube of glass, its base embedded in a plastic substance which protects the tube from shock and breakage. The sign is activated by a battery which gives 18 hours service on one cell. A small vibrator changes the direct current to alternating current and a transformer steps up its voltage. Battery, vibrator and transformer are carried in the boy's apron.—Popular Mechanics.

Lead A Charmed Life

According To History Queen Victoria Escaped Many Dangers

Historians are right in more ways than one in saying that Queen Victoria, who was born on May 24, 1819, led a "charmed life." When she was six months old her parents, the Duke and Duchess of Kent, who were in "strained circumstances," took her to Sidmouth, a health resort on the Devonshire coast, where they occupied a rented cottage. There, while the royal infant was in the arms of her nurse, one of the town's bad boys, who was hunting birds, carelessly shot an arrow through a nursery window and it missed the precious baby's head. In the words of Sir Sidney Lee, "it went very near ending her career before it was well begun."

In her thirteenth year Victoria, then on a sea trip with her mother, again narrowly escaped death when, during a sudden gale, the ship's topmast came crashing down. Only an instant before the accident a quarrel had broken out between the queen-to-be and her mother, and the ship's topmast came crashing down. Only an instant before the accident a quarrel had broken out between the queen-to-be and her mother, and the ship's topmast came crashing down.

Not least among the "charmed life" factors in Victoria's long and eventful career were those which brought her to the throne. At her birth she ranked fifth in the royal succession. Between her and the crown stood her three uncles—the Prince Regent, the Duke of York and the Duke of Clarence (later William IV) as well as her father, the Duke of Kent. In January, 1820, both her father and her grandfather, George III, died, and the Prince Regent became George IV. When she was eight months old, therefore, the four lives that had stood between the tiny princess and the throne were suddenly reduced to two—the Duke of York, aged 57, and the Duke of Clarence, 55—neither of whom had a lawful heir or seemed likely to have one. Consequently it was then reasonably certain that Victoria would one day be England's Queen.

A vast deal of history has been made during the one hundred years since the girlish Victoria began to receive the crown and a prophetic ray of sunshine—popularly interpreted as an augury of good fortune—fell upon her head as she did so. It is, however, somewhat appalling to contemplate that had the boy's arrow taken a slightly different course in its flight world events of the last century might have made a very different pattern and all the recent travail over the British kingdom would not have come to pass.—From the New York Sun.

Would Export Helium

U.S. War Department Approves Exportation In Peace Time

Major General Oscar Westover, chief of the United States army air corps believes dirigibles can be used "very effectively" against United States industrial areas during mobilization for any future war. In an appearance before a senate military affairs sub-committee studying a bill to permit exportation of helium, Westover said the big sky-riders can be "a very decisive factor in the initial stages of defense."

Westover was disclosed to have told the committee the war department approved exportation of the gas for "humanitarian, scientific or strictly commercial airship purposes" in peacetime.

In wartime, however, Westover added, "it would not make much difference whether you have helium or hydrogen—if you are going to accomplish your military mission, you are going to sacrifice everything."

The first American airport book was edited by Edward Blackwell in 1734. It was a reprint of a British book, with American references.

Livestock Production

Export Marketing Is One Of The Three Most Important Phases Of Industry

"Export marketing is one of the three important phases of livestock production, Hon. J. G. Gardiner, federal minister of agriculture, told 800 Holstein breeders at Guelph. He said the other two phases were good breeding and good feed."

Mr. Gardiner said he recently visited England and learned from farmers there what small things governed the export market. One farmer in Cheshire had 135 Canadian Holstein cows and he declared he would not use any others on his dairy herd.

However, said Mr. Gardiner, many Canadian dairy cows were slaughtered at the farm because they did not come up to English standards. He found England wanted a cow which would be bred so as to produce good beef.

Watching a sale of steers in Glasgow, at which animals averaged 850 lb., Mr. Gardiner discovered Scottish and English farmers did not want steers which had lost part of an ear. The reason was that the British government pays a bonus to farmers who take these steers and feed them for three months. They punch each one in the ear so that it could not be sold for this purpose twice, and in the case of cattle with damaged ears, they might suspect the farmer had clipped the ear to remove the punch mark.

He had come to the realization, Mr. Gardiner said, that more information on the requirements of the export market was needed by Canadian producers.

Preference In Notables

Lord Tweedsmuir Speaks Of Statesmen Whom He Has Known

In a luncheon address at St. John, N.B., Lord Tweedsmuir indicated his preference in notables, now dead, whom he had known. Among men, as "builders," he selected Cecil Rhodes, Lord Cromer and Theodore Roosevelt. William Gladstone and Herbert Asquith were mentioned as great statesmen. His Excellency preferred Lord Balfour and Sir Wilfrid Laurier. "Lawrence of Arabia" was the one soldier of genius I have known."

Of all the literary men he had known he thought the name of Rudyard Kipling would be remembered the longest.

"I hope I won't be considered a stiff traditionalist if I say that in my own recollection it seems to me the power of public speaking has declined," said His Excellency. "I hope it will not be considered high treason if I say that there is no one in Canada to-day who speaks as Sir Wilfrid Laurier spoke."

"I am inclined to think radio is taking the heart out of oratory. Yet it will always be a great art, and perhaps conditions of the wireless will produce a new kind of oratory where the demagogue will be at a disadvantage."

League Of Nations Society And Canada's Position In The Event Of War

Canada's position in the event of war, and how Government policy in such an eventuality would compare with avowed League of Nations policies, was debated when the newly-elected executive committee of the League of Nations Society in Canada met at a luncheon at the Chateau Laurier in Ottawa, under chairmanship of Senator Cairine Wilson.

Principal R. C. Wallace, of Queen's University, said he was perplexed, as a member of the society's executive, as to the real position of Canadians in the League of Nations Society, and the relation of them to what was, presumably, governmental policy at the present time in Canada.

He believed this should be clarified, and said: "If collective security means that we have to insist to the Government that Canada has to be ready to take part in a League war, in any part of the world, I think we would find ourselves in a position of isolation in Canada."

Hon. R. J. Manion, former Minister of Railways and Canals, said the point raised by Dr. Wallace was an urgent one. "We all want to live up to obligations that Canada takes upon herself. But, until there is something like a united opinion with regard to what Canada should do, we are up against a difficult proposition."

John W. Dufour, of Winnipeg, declared his opinion was the League of Nations Society in Canada was definitely a propaganda organization, moving to make an effective League. It was not merely a gathering to speak of the beauty of security. "It would like to see in Canada an organization which has a definite view that would call out and create public opinion in the face of this country not living up to its obligations," he said. Mr. Dufour declared the League of Nations Society had expressed that view, and he supported it heartily.

The executive meeting was well attended, and considerable discussion took place. Representatives were present from the Canadian Teachers' Federation, the Dominion Command, Canadian Legion, National Council of Women of Canada, and the Trades and Labor Congress, and letters were received promising support from the Social Service Department, of the Church of England in Canada and others.—Ottawa Journal.

Teaching Of Pacifism

Britisher Is Against The Methods Used In Schools

R. H. Rayner, Conservative, rapped current methods of teaching in the British House of Commons during debate on the board of education estimates. "It makes one's blood boil to think of instances from our history and the doings of our generals and admirals being cut out of history books," he declared. Rayner contended it was most dangerous to teach pacifism and the brotherhood of man while other nations were teaching their children that the only things that matter are soldiers, the rights of wrongs and the glory of arms. "Children, he said, must be told 'they have got a duty towards the state in peace and war.' Some teachers might be told 'a few home truths about patriotism,'" he declared.

Another side of the argument given by Rev. C. G. Holland, vicar of Ewell, writing in his parish magazine. He termed military tattoos "a glorification of mass murder."

Tatars, he said, "whited sepulchres because they present war under the aspect of a glorious adventure instead of showing it as it is, a filthy, beastly sham; whited sepulchres because they show our own side always victorious and the 'enemy' ignominiously routed."

Makes Lucky Discovery

Ottawa Man Visiting New Jersey Finds Lump Of Ambergris

Local residents were all but kicking themselves for passing by an insignificant looking mass of substance that floated ashore at the foot of 32nd Avenue, Longport, New Jersey. James Schurrman, a visitor from Ottawa, Ont., was curious about it. Two hours afterward he was on a train headed for New York. In a suitcase was what he believed to be 26 pounds of pure ambergris, calculated to be worth more than \$16,000. Ambergris, a substance thrown off by whales, is used in the making of perfume.

The stuff looked like unhardened concrete, but Schurrman observed oil coming from it. He had never seen ambergris, but he guessed it was that. He went to the town library and learned ambergris would dissolve in hot alcohol. The stuff dissolved, all right.

Forecast Long Reign

A long and successful reign for Queen Elizabeth is forecast by Indian astrologers in Bombay. The star under which the Queen was born is Mars—the same as that of the famous Kohinoor diamond set in the Queen's crown and this is considered a happy coincidence.

Tea Towels Furnish A "Dutch Treat"

Folk! Meet the "Dutch Twins" who find housekeeping all play and no work. You're sure to make quick work of their animated antics, embodied in speedily 5-to-the-minute set of tea towels. You can use every color of floss you own in these seven quickly stitched motifs, for Hans and Heidi are indeed "colorful" characters! Order the pattern and make a set for your own kitchen, or another's. In pattern 5868 you will find seven motifs—one for each day of the week—averaging 6 1/2 x 8 inches; material requirements; illustrations of all stitches used and color suggestions.

To obtain this pattern send 20 cents in stamps or coin (cash preferred) to Household Arts Dept., Winnipeg Newspaper Union, 178 McDermott Ave. E., Winnipeg.

There is no Alice Brooks pattern book published

Household Arts by Alice Brooks

Do Tea Towel Motifs in Realistic Colorings

Vehicle Traffic may be closed at any time every day in Hongkong in order to permit children to play football is being considered. Football is the favorite game of the Burmese boys. They play it in the streets throughout the day at great danger to themselves.

Patient: I understand that is good for the brain. Can you recommend anything special? Doctor: Well, you might begin with a whale.

In the centre of a new restaurant recently opened by Lady Hewart, wife of the lord chief justice, in Holborn Circus, London, water gushes from an artesian well.

The remora fish will hide in the mouth of a shark in order to escape its enemies.

Seven thousand tons of water go over Niagara Falls every second.

'Way Back When?
(From the Minutes of the
Town Councils)
30 YEARS AGO—JULY, 1907
A motion that Councillor F. Vic-
kerson, seconded by Councillor H. A.
Murphy, "that the resignation of R.
C. Webster, Town Constable, be
accepted, was passed.
The application of F. V. Parsons
for the position as Town Constable
was referred to the Police, Parks
and Cemetery Committee.
25 YEARS AGO—JULY, 1912
A grant of \$500 was made to the
Lacombe Board of Trade, such
money to be used for the purpose
of advertising the Town and aiding
new industries in locating here.

Former Headhunters Seek Christianity

Pastor Speaks of Travels at
Adventist Encampment Here

Telling how headhunters of Luzon
and wild Moros of Mindanao are
being converted, how the primitive
ushun of the far hinterlands are
calling for the missionary and the
Gospel, Pastor W. H. Berghern, 11
years a missionary in the Philip-
pines, arrives at Lacombe recently
from Washington, D.C., Adventist
world headquarters, and attended
the S.D.A. encampment at Canadian
Junior College.

"The western world would do well
to keep their eyes on the Far East,"
said Pastor Berghern, who has
traveled in Japan and China as well
as to the Philippines. "The Philip-
pines are building the fabric of a
strong independent government but
are being forced to launch their ship
of state in seriously troubled waters."
Situation is intense.

"The situation of the nations of the
Far East is an intense one,
charged with most dangerous poten-
tialities. Unlike Europe, the Far
Eastern powers have not witnessed
the devastating effects of modern
warfare. Only the power of the
Gospel of peace as enunciated by
the Prince of Peace can save the
world from the awful catastrophe
of another world war. This in-
fluence of Christ is being felt in
China, Japan, and the Philippine
Islands to a greater extent than ever
before. Every sixth man in China's
'Who's Who' is a praying Chris-
tian," said Pastor Berghern.

Police Court News

F. A. Coverdale was fined \$3 and
costs on a charge of operating a car
with license plates other than those
issued for the automobile when he
appeared before Magistrate E. H.
Jones on Saturday.
On a charge of intoxication, L.
Beach was fined \$25 and costs at
the same sitting. He pleaded guilty.

Bob Park Places Second in Competition

Wearing a big smile, Bob Park
of Park's Garage has been proudly
exhibiting to the natives around
town a beautiful wrist watch, which
he won as second prize in the Ford
Motor competition for the largest
car sales during the month of June
in Alberta, outside of the cities of
Calgary and Edmonton.

Bob must be accumulating quite a
jewelry store, as during the
months of April and May he won
the first prizes given by the same
firm in each of those months.
Grande Prairie beat him out for
first prize in June, and Bob had to
be content with second place. How-
ever, two firsts and a second prize
in three consecutive months for
sales is not to be sneezed at, and
is nice going in any line of business.

The Churches

**CHURCH OF ENGLAND IN
CANADA**
Incumbent: The Rev. W. E. Herbert
Licentiate Lay Readers: E. H. Jones,
K.C., and A. T. Ingham.

11:00 a.m.—Matins.
7:30 p.m.—Evensong and sermon.

ST. ANDREW'S UNITED CHURCH
Services at 11 a.m. and 7:30 p.m.
Rev. H. A. Boyd, B.D., of Ver-
million, will occupy the pulpit at
both services.
A Congregational Picnic is being
planned for Wednesday afternoon,
August 11th, at Meridian Beach. It
is hoped that everyone in the con-
gregation will be able to attend.
coming winter.

CHRISTIAN SCIENCE
At all Christian Science churches
next Sunday, the subject of the
Lesson-Sermon will be "Love." The
following is one of the Scriptural
quotations contained in the Lesson-
Sermon: "But ye, beloved, building
up yourselves on your most holy
faith, praying in the Holy Ghost,
Keep yourselves in the love of God,
looking for the mercy of our Lord
Jesus Christ unto eternal life" (Jude
1:20, 21). One of the correlative
passages from "Science and Health
with Key to the Scriptures," by Mary
Baker Eddy, is as follows (page
406): "Ask yourself: Am I living
the life that approaches the supreme
good? Am I demonstrating the
healing power of Truth and Love?
then the way way grows
brighter 'unto the perfect day.'"

There will be fall race meets in
both Calgary and Edmonton this
year.

I.O.D.E. TEA SHOWS WORK OF BLIND

A splendid exhibit of work done
by the Canadian National Institute
for the Blind was shown at a well-
attended public tea given by the
Lord Lascelles Chapter, I.O.D.E., at
the cottage of the Regent, Mrs. P.
W. Pratt, at Aspen Beach on Wed-
nesday afternoon, July 21.

The work created much interest
and a considerable amount was
sold. The proceeds will be used to
further the work and help the funds
of that institution. The affair was
greatly enjoyed by all those who
showed a relatively high demand.

Prospects of Wool Market Good

The wool market is holding well
and members of the Central Alberta
Wool Growers' Association will re-
ceive fairly good prices, according
to a circular letter received by D.
P. Chisholm, secretary of the Wool
Growers' Association.
The letter is from the Canadian
Co-operative Wool Growers' Asso-
ciation, with which the local asso-
ciation is affiliated, and strikes a
note of optimism regarding the mar-
keting of wool. The quality of the
wool being received is evidently of
a fairly even high quality and re-
ports from the English Agencies
show a relatively high demand.

Local Car Sales Show Increase

Seven new Chevrolets have been
sold by Laird Motors within the last
couple of weeks, climbing one of
the best months that firm has en-
joyed in some years. Delivery of
new "Chevy" have been made to
Warner Vail and W. MacDonald,
both of Bentley; M. B. Tucey, D. H.
Kennedy, F. C. Kenners, H. Steven-
son and Herman Backus, all of Rim-
bey. In addition, K. D. McDougall
of Tees has purchased a new Maple
Leaf 2 1/2-ton 174-inch wheelbase
truck.
Sales such as these prove that con-
ditions in the district are not nearly
as bad as some would have a person
believe.
